**Abstract of EP1075931**

The eccentric press has at least one eccentric shaft (3) with drive (49) connected to the shaft by means of a transmission gear (43) in the form of a differential gear. The drive's output is distributed onto two parallel transmission stages (44, 45). The eccentric shaft has a spur wheel (12). The transmission gear has two parallel intermediate shafts (25, 25') each of which has a power-take-off (27, 27') between the two stages and connected to the eccentric shaft.
